NP	Norther Producer
OGA	Oil and Gas Authority
OPEP	Oil Pollution Emergency Plans
OPRED	Offshore Petroleum Regulator for Environment and Decommissioning

ABBREVIATION	EXPLANATION
OSPAR	Oslo-Paris Convention
Phase 1	Phase 1 of the decommissioning activities concern the departure of the Northern Producer Floating Production Facility, removal of the associated riser systems and clearance of the 500m safety zone. The scope of the Phase 1 activities is addressed in a separate Decommissioning Programme document [1]
Phase 2	Phase 2 of the decommissioning works concerns decommissioning of the Conrie, Don South-West, West Don and Ythan installations as well as the remaining pipeline infrastructure, and is the subject of this Decommissioning Programme document
Piggybacked	Clamped or connected to another pipeline along its length
Pipeline	Pipeline or umbilical pipeline
P1, P2, WI1	Production (P) or Water Injection (WI) Tree Identifier
PL, PLU	Pipeline, Umbilical Pipeline Identification numbers (UK)
PON	Petroleum Operation Notification
PWA	Pipeline Works Authorisation
Q1, Q2, Q3, Q4	Quarter 1, Quarter 2, Quarter 3, or Quarter 4 of any given year
RBS	Riser Base Structure (part of Phase 1 decommissioning scope as distinct from RBS at Thistle)
RBMS	Riser Base Manifold Structure
ROV	Remotely Operated Vehicle
ROVSV	Remotely Operated Vehicle Support Vessel
SAC	Special Area of Conservation
SAL	Single Anchor Loading
SALB(MB)	Single Anchor Loading Buoy (Mooring Base)
SDU	Subsea Distribution Unit
SFF	Scottish Fishermen's Federation
SIMOPS	Simultaneous Operations
SOPEP	Shipboard Oil Pollution Emergency Plan
SPS	Subsea Protection Systems (www.subseaprotectionsystems.com)
SS	Subsea (in the context of wells which could also be "PL" platform), or, South-South for compass direction
SSIV	Subsea Isolation Valve
SUTU	Subsea Umbilical Termination Unit
TAQA	TAQA Bratani Limited
Te	Metric Tonne, 1000 kilogrammes force
TFSW	Trans Frontier Shipment of Waste
Thistle	Thistle Alpha installation
Topsides	Offshore structure typically furnished with reception and processing equipment for produced hydrocarbons, in this case the Northern Producer FPF
TRBS	Thistle Riser Base Structure

UK	United Kingdom
UKCS	United Kingdom Continental Shelf
WD	West Don
WGS84	World Geodetic System 1984
WHPS	Wellhead Protection Structure
WI	Water Injection
WS	Wye Structure
x	Number of (e.g. 16x = 16 in Number)
	PWA Idents of pipelines affected by decommissioning proposals in this document. Refer Table 1.5.1, Table 1.5.5 & Table 1.5.7.

1. EXECUTIVE SUMMARY

1.1 Decommissioning Programmes

This Decommissioning Programme document concerns decommissioning of the Conrie, Don South-West, West Don and Ythan installations and associated pipeline infrastructure. This follows the departure of the Northern Producer Floating Production Facility, removal of the associated riser systems and clearance of the 500m safety zone, which were addressed in a separate combined Decommissioning Programme document [1]:

- Don South-West (DSW) and West Don (WD) Single Anchor Loading Buoy Mooring Base (SALBMB)
- Don South-West and West Don pipelines PL2578, PL2579, PLU2580, PLU2580JSG, and PLU2580JSO;
- Conrie wellhead protection structure (1x), and;
- Conrie pipelines PL2572 (original idents 5 to 8 only), PL2573 (original ident 18 to 21 only) and PLU2576JP4;
- Don South-West wellhead protection structures (10x), and;
- Don South-West pipelines PL2572 (excluding idents 5 to 8) , PL2573 (excluding idents 18 to 21), PLU2576, PLU2576JP1 through PLU2576JP7, PLU2577, PLU2577JWI2, PLU2577JWI3, PLU2577JWI4, PL2581, PL4262, and PL4557;
- West Don wellhead protection structures (5x), and;
- West Don pipelines PL2582, PL2583, PL2584, PLU2585, PLU2585JP1, PLU2585JP2, PLU2585JP3, and PLU2585JWI1, PLU2585JWI2, and PL4261;
- Ythan wellhead protection structure (1x), and;
- Ythan pipelines PL3749, PL3751, PLU3752, PLU3753, and PLU3754.

Although decommissioning of the installations and pipelines are being treated in this document as a standalone project, on behalf of the Section 29 holders, EnQuest Heather Limited (EnQuest) will also continue to explore cost saving synergies with other projects.

1.2 Requirement for Decommissioning Programmes

Installations: In accordance with the Petroleum Act 1998, EnQuest, as owner and operator of the Don South-West & West Don SAL , Conrie, Don South-West, West Don and Ythan installations, and on behalf of the Section 29 notice holders (Table 1.4.2, Table 1.4.3, Table 1.4.4, Table 1.4.5, and Table 1.4.6), is applying to OPRED to obtain approval for decommissioning the installations detailed in Section 2 of this document. Partner Letters of Support will be provided directly to OPRED.

Pipelines: In accordance with the Petroleum Act 1998, EnQuest, as owner and operator of the Don South-West and West Don, Conrie, Don South-West, West Don and Ythan pipelines, and on behalf of the Section 29 notice holders (Table 1.5.2, Table 1.5.4, Table 1.5.6, Table 1.5.8 and Table 1.5.10) is applying to OPRED to obtain approval for decommissioning the pipelines detailed in Section 2 of this document. Partner Letters of Support will be provided directly to OPRED.

Following public, stakeholder and regulatory consultation, the Decommissioning Programmes are submitted in compliance with national and international regulations and OPRED guidance notes. The schedule outlined in this document is for a five-year period due to begin sometime in Q2 2025.

1.3 Introduction

Since May 2009, the Northern Producer Floating Production Facility has provided the export route for the Don South-West, Conrie Ythan and West Don fields that are situated within Blocks 211/13b,

211/18a, and 211/18e of the Northern North Sea sector of the United Kingdom Continental Shelf and operated by EnQuest. These fields are located approximately 527km north-north-east of Aberdeen in water depths between ~172m and ~178m. The Cessation of Production documentation for these fields is currently under consideration by the Oil and Gas Authority.

A Riser Base Structure (RBS) used to be installed on the seabed with rigid spool pieces connecting the inter-field pipelines to the RBS. Dynamic flexible risers were installed in a “lazy S” configuration and are being recovered as part of Phase 1 of the decommissioning works. Please refer Figure 1.7.2, Figure A.1.1 and Figure A.1.2.

Processed production fluids from the Fields were initially exported via PL2578, an 8in export pipeline to a submerged Single Anchor Loading Buoy (SALB) to facilitate shuttle tanker oil loading. Crude oil was then exported via the same 8in pipeline – albeit modified, to a Wye connection comingling Northern Producer and Thistle export oil for export to the Magnus Platform via PL4556. Processed gas was used as lift gas for both fields, fuel gas purposes for the installation’s turbines with the excess flared. Additionally, gas is imported, normally to assist with well start-up, via the 3-inch gas pipeline (PL2579) installed between the Northern Producer riser base structure and the Thistle Platform. Between the original RBMS in the NP 500m zone and Thistle PL2579 is piggybacked onto PL2578 as far as the Wye Structure and PL4555 downstream. PL4555 used to be PL2578 before it was modified and transferred to the Thistle owners.

Processed oil from the Conrie, Don South-West and Ythan fields used to be transported via PL2572, an 8in pipeline to the Northern Producer while processed gas was imported from the Northern Producer via PL2573 a 3in pipeline. Hydraulic controls and injection chemicals used to be provided from the RBMS in the 500m zone to the DSW Subsea Distribution Unit (SDU) via PLU2576 and from there to the Conrie and DSW production wellheads via PLU2576JP1 through PLU2576JP7. Hydraulic control and injection chemicals were supplied to the Ythan production wellhead from the DSW SDU using PLU3752, PLU3753 and PLU3754. PLU3753 and PLU3574 were connected using an external SDU located next to the DSW P7 production wellhead. Hydraulic control of the four water injection wellheads WI1, WI2, WI3, and WI4 was provided via the DSW SDU using umbilical pipelines PLU2577, PLU2577JWI2, PLU2577JWI3, and PLU2577JWI4, respectively.

Water injection used to be provided from the RBSM to the DSW water injection wellheads WI1 and WI2 using PL2581, an 8in pipeline, although for integrity reasons this pipeline was taken out of service and replaced with PL4262, which is an 8in pipeline routed to DSW WI4.

PL2572 is piggybacked onto PL2573 and both lie in the same trench as PLU2576 and are overlain with deposited rock. PLU2577 and PL2581 were laid separately and trenched and buried in the seabed. PL4262 was surface laid but buried under deposited rock.

Processed oil from the West Don fields used to be transported via PL2583, an 8in pipeline to the Northern Producer while processed gas was imported from the Northern Producer via PL2584 a 3in pipeline. PL2584 is piggybacked onto PL2583. Hydraulic controls and injection chemicals used to be provided from the RBMS in the 500m zone to the WD Subsea Distribution Unit (SDU) via PLU2585 and on to the WD production wells P1, P2, and P3 using PLU2585JP1, PLU2585JP2, and PLU2585JP3, respectively.

Water injection used to be provided from the RBSM to the WD water injection wellhead WI1 using PL2582, an 8in pipeline, although for integrity reasons this pipeline was taken out of service and replaced with PL4261, which is also an 8in pipeline routed to WD WI1.

PL2584 is piggybacked onto PL2583 and lie in the same trench. PL2582 and PLU2585 were laid separately and trenched and buried in the seabed except within the original NP 500m zone where they are overlain with deposited rock. PL4261 was surface laid but buried under deposited rock.

Note that there are several items of equipment such as protection and stabilisation features around the Wye Structure that are also used for part of the Thistle ‘A’ pipeline infrastructure (i.e. PL4555) and within the Thistle ‘A’ 500m zone including the Subsea Isolation Valve (SSIV) skid and riser bases.

The decommissioning proposals for these are explained in the relevant sections of the Decommissioning Programmes. Please refer Figure 1.7.3 and various figures in Appendix B for the scope of the Phase 2 Decommissioning Programmes contained herein.

The Decommissioning Programmes explain the principles of the removal activities and are supported by a comparative assessment for the pipelines [2] and an environmental appraisal [3].

1.4 Overview

1.4.1 Installations

Table 1.4.1 Installations Being Decommissioned									
Field Names, UKCS Block(s), Production			**Surface Installations**					**Distances**	
Field Installation ID	**UKCS Block(s)**	**Type of Production**	**Number**	**Function**	**Type**	**Topsides Weight (Te)**	**Jacket Weight (Te)**	**Distance to Median (Norway)**	**Distance from UK coastline**

1.6 Summary of Proposed Decommissioning Programmes

Table 1.6.1: Summary of Decommissioning Programmes	
Proposed Decommissioning Solution	**Reason for Selection**
1. Installations	
Complete removal. The Conrie, Don South-West, West Don and Ythan installations and Single Anchor Loading Buoy Mooring Base (SALBMB) will be fully removed, taken to shore, dismantled, and recycled unless alternative re-use options are found by the owner to be viable and more appropriate. Note that the SALBMB will be removed at the same time as when decommissioning works associated with the Thistle Wye Structure are carried out. Any permit applications required for work associated with removal of the installations will be submitted to the regulator as required.	To comply with OSPAR requirements. Allows installations to be removed and maximises opportunity for re-use or recycling of materials.
2. Pipelines	
All the surface laid pipelines associated with the Conrie, Don South-West, West Don and Ythan infrastructure will be cleaned and flushed and fully removed. This will remove potential snagging hazards from the area. Sections of pipelines that are trenched and buried, either in the seabed (PLU2577, PL2581, PL2582 and PLU2585) or buried under rock (PL2578 & PL2579, PL2572 & PL2573, PL2583 & PL2584, PL4261, PL4262, and PLU2576) will be left *in situ*. The Don South-West pipelines cross over the Don field pipelines PL598, PL599, PL600 and the 4" control umbilical. As these are also being left *in situ*, they will be unaffected by the decommissioning of the DSW pipelines (PL2572, PL2573, PLU2577, PL2581, and PL4262. In order to explore synergistic opportunities PLU2580 (which incorporates PLU2580JSO and PLU2580JSG) and associated infrastructure such as riser bases (PLU2580 & PL2579), SSIV skids and pipelines within the Thistle 'A' 500m safety zone will likely be decommissioned at the same time as the Thistle 'A' installation and infrastructure. Note that the protection and stabilisation features associated with PL2579 as it by-passes the Wye Structure also protect and stabilise PL4555 which belongs to the Thistle owners. These features will be left *in situ* until PL4555 is decommissioned. This is explained in the relevant tables in the Decommissioning Programmes herein. The SSIV and Riser Bases at Thistle 'A' will be left *in situ* meantime pending decommissioning of the Thistle pipelines and infrastructure inside the Thistle 'A' 500m safety zone. Any permit applications required for work associated with pipeline pigging, flushing, cutting and removal will be submitted to the regulator as required.	Removes a potential obstruction to fishing operations and maximises recycling of materials.
3. Wells	
The wells associated with the Don South-West, Conrie, Ythan and West Don fields will be decommissioned to comply with HSE "Offshore	Meets the OGA and HSE regulatory requirements.

Table 1.6.1: Summary of Decommissioning Programmes	
Installations and Wells (Design and Construction, etc.) Regulations 1996" and in accordance with the latest version of the Oil & Gas UK Well Decommissioning Guidelines. Depending on the complexity of requirements the wells will most likely be decommissioned using a semi-submersible drilling rig. A Master Application Template (MAT) and the supporting Subsidiary Application Template (SATs) will be submitted in support of activities carried out; a PON5 application will be submitted to OGA to decommission the wells.	
4. Interdependencies	
The decommissioning works will be carried out in two phases. 1) Departure of the Northern Producer and removal of snagging hazards in and around the 500m zone; 2) decommissioning of remaining installations and infrastructure. Phase 1 is being dealt with using separate Decommissioning Programmes. All of the installations will be removed. No third-party pipeline crossings will be disturbed as a result of the decommissioning proposals. Pipeline stabilisation features such as concrete mattresses and any grout bags found that are exposed (i.e. not buried under deposited rock) will be removed as part of the pipeline decommissioning activities. Although some deposited rock may be disturbed during the removal activities, it will remain *in situ*. In order to explore synergistic opportunities and efficiencies in operational activity and cost, it's possible that the pipelines around the Wye structure (PL2578 & PL2579) will be dealt with at the same time as Wye structure and Thistle pipelines PL4555 & PL4556 and within the Thistle 500m safety zone, PL2579, PLU2580, PLU25480JSO and PLU2580JSG will be decommissioned at the same time as the Thistle infrastructure.

TAQA	Eider	Fixed steel jacket	SW, 19.9km	SW, 23.9km	SSW, 21km	Topsides DP approved April 2020	Non-operational
Impacts of Decommissioning Proposals							
There are no direct impacts on adjacent facilities from the decommissioning works associated with Conrie, Don South-West, West Don and Ythan installations and associated pipeline infrastructure. As part of the operational phase any potential environmental impacts will be mitigated in two ways. The first is via direct communication with the parties involved, and the other is via submission of the MATs and SATs.							

1.8 Industrial Implications

The activities to disconnect or sever and recover the Conrie, DSW, WD and Ythan installations, surface laid pipelines and associated structures, and protection and stabilisation features will be completed using one or a combination of vessels including ROV Support Vessel (ROVSV), Construction Support Vessel (CSV), Multi Support Vessel (MSV) and Anchor Handling Vessel (AHV).

It is the intention of the respective owners of the installation and pipelines to develop a contract strategy and Supply Chain Action Plan that will result in an efficient and cost-effective execution of the decommissioning works. Where appropriate existing framework agreements may be used for decommissioning of the pipelines and pipeline stabilisation features. EnQuest will seek to combine the decommissioning activities with other development or decommissioning activities to reduce mobilisation costs should the opportunity arise. The decommissioning schedule is extended to allow flexibility for when decommissioning operations are carried out and completed.

2. DESCRIPTION OF ITEMS TO BE DECOMMISSIONED

No surface Installations are being decommissioned as part of the proposals contained herein.

2.1 Don South-West and West Don Assets

2.1.1 Subsea Installations including Stabilisation Features

Table 2.1.1: DSW & WD Subsea Installation Information					
Subsea Installations Including Stabilisation Features	Number	Mass (Te) / Size (m)	Location		Comments/ Status
			WGS84 Decimal	WGS84 Decimal Minute	
SALB	1	103.1 13x13x8.1	61.495608° N 01.428825° E	61° 29.7365' N 01° 25.7295' E	Refer Figure 1.7.2 and Figure B.4.1. Note that PL4557 on the SALB is noted on the Section 29 for the DSW owners.
Concrete mattresses	n/a	n/a	n/a	n/a	n/a
Grout bags	n/a	n/a	n/a	n/a	n/a
Formwork	n/a	n/a	n/a	n/a	n/a

Other	n/a	n/a	n/a	n/a	n/a

2.1.2 Pipelines including Stabilisation Features

Table 2.1.2: DSW & WD Pipeline/Flowline/Umbilical Information										
Description	**Pipeline Number (as per PWA)**	**PWA Ident[4]**	**Diameter (NB) (inches)[1]**	**Length (m)**	**Description of Component Parts**	**Product Conveyed**	**From – To End Points[2]**	**Burial Status**	**Pipeline Status[5]**	**Current Content[5]**
Oil export pipeline	PL2578	4	8”	5,086	Carbon steel flowline	Oil	RBS Expansion spool flange to WS	Trenched and buried under deposited rock between KP0.002 and KP5.047	Out of use	Inhibited seawater
Gas import/export pipeline	PL2579	6	3”	5,086	Carbon steel flowline	Gas	Start & finish of flowline on approach to WS	Same trench as PL2578 buried under deposited rock	Out of use	Inhibited seawater
		7	3”	45	Expansion spool	Gas	By-passes WS	Surface laid, covered with concrete mattresses	Out of use	Inhibited seawater
		8	3”	10,089	Carbon steel flowline		Downstream of WS to expansion spool upstream of Thistle SSIV	Trenched and buried under deposited rock between KP5.214 and KP15.264		
		9	3”	30	Expansion spools		Between end of flowline and Thistle SSIV	Surface laid, partly covered with concrete mattresses		
		10	3”	7			Between Thistle SSIV and TRBS			
		11	175.9mm	300	Flexible riser		TRBS to Thistle ESDV	Suspended in water column		

Table 2.1.2: DSW & WD Pipeline/Flowline/Umbilical Information										
Description	**Pipeline Number (as per PWA)**	**PWA Ident[4]**	**Diameter (NB) (inches)[1]**	**Length (m)**	**Description of Component Parts**	**Product Conveyed**	**From – To End Points[2]**	**Burial Status**	**Pipeline Status[5]**	**Current Content[5]**
Control umbilical	PLU2580	1-4	87mm	300	Static umbilical	Hydraulic fluids	Thistle TUTU to Thistle SSIV SUTU	Suspended in water adjacent to Thistle 'A' installation	Out of use	Hydraulic fluids
	PLU2580JSO	1-2	66mm	105	Flexible thermoplastic umbilical	Hydraulic fluids	TRBS to Thistle SSIV	Surface laid and intermittently protected and stabilised by concrete mattresses and grout bags		
	PLU2580JSG	1-2	66mm	105						

NOTES

1. If diameter is expressed in mm it refers to outside diameter of umbilical;
2. For brevity, the description of the end-to-end points may differ slightly from those consented;
3. PL2578 idents 1-3 and PL2579 idents 1-5 are to be removed as part of Phase 1 of the decommissioning works and are therefore not listed here;
4. PWA Idents highlighted in green are affected by proposals in the Decommissioning Programmes that address Phase 1. Decommissioning of the remaining sections of pipelines are addressed by proposals herein;
5. Pipeline status and current content assume that the Northern Producer has departed with the pipeline and umbilicals dealt with accordingly.

Table 2.1.3: DSW & WD Subsea Pipeline Stabilisation Features & Structures					
Stabilisation Feature & Size (m)	**Total Number**	**Total Mass (Te)**	**Location(s)**		**Exposed/Buried/Condition**
			WGS84 Decimal (If quoted):	**WGS84 Decimal Minute (If quoted)**	
Concrete mattresses[1]	46	150.9	**PL2578 (& PL2579)** 13x North of WS; and 1x on approach to WS; **PL2579** 9x South of WS. Refer Figure B.4.1.		Burial status will be determined when decommissioning activities are being carried out. Assumed exposed, resting on seabed.
			PL2579 2x At Thistle Riser Base, 2x between TRBS and DFGI SSIV; 1x between DFGI SSIV and Thistle SSIV; 15x between deposited rock at trench and Thistle SSIV. Refer Figure B.5.1.		
			PLU2580JSO/PLU2580JSG 3x Between TRBS and Thistle SSIV. Refer Figure B.5.1.		Burial status will be determined when decommissioning activities are being carried out. Assumed exposed, resting on seabed.
Grout bags (25kg)[3]	1280	32.0	**PLU2580** 1280x in and around the TRBS. Refer Figure B.5.1.		Burial status will be determined when decommissioning activities are being carried out. Assumed exposed, resting on seabed.
Deposited rock[4]	n/a	18,784	**PL2578 (& PL2579)** between KP0.002 and KP5.047 (i.e. ~5,9km long) upstream of the Wye Structure from the riser bases inside the Northern Producer 500m zone. Refer Figure 1.7.2.		Exposed.
	n/a	38,593	**PL2578[4] (& PL2579)** between KP5.214 and KP10,050 (i.e. ~10.01km long) downstream of the Wye Structure towards Thistle 'A'. Refer Figure 1.7.2.		Exposed.
PL2578 8" Oil Export and PLU2580 Thistle 3" SSIV umbilical riser base and protection structure (6.1m x 2.8m x 0.5m)[6]	1	62.5	61.366030° N 01.577850° E Refer Figure B.5.1	61° 21.9618' N 01° 34.6710' E Refer Figure B.5.1	Burial status will be determined when decommissioning activities are being carried out. Assumed exposed, resting on seabed.
PL2579 3" SSIV & Protection Structure (6m x 3.5m x 3.0m)[6]	1	34.0	61.365680° N 01.576722° E	61° 21.9408' N 01° 34.6033' E	

Table 2.1.3: DSW & WD Subsea Pipeline Stabilisation Features & Structures					
Stabilisation Feature & Size (m)	Total Number	Total Mass (Te)	Location(s)		Exposed/Buried/Condition
			WGS84 Decimal (If quoted):	WGS84 Decimal Minute (If quoted)	
			Refer Figure B.5.1	Refer Figure B.5.1	
PL2579 3" gas import riser base and protection structure (3.8m x 2.8m x 0.5m)[6]	1	29.0	61.365887° N 01.577325° E Refer Figure B.5.1	61° 21.9532' N 01° 34.6395' E Refer Figure B.5.1	

NOTES:

1. Concrete mattresses are 'SPS' type: 6m x 2m x 0.15m (Approx. mass each mattress 3.14Te) or 6m x 3m x 0.15m (Approx. mass each mattress 4.72Te);
2. All concrete mattresses near the Wye Structure and on approach to Thistle 'A' installation will be left *in situ* meantime pending decommissioning of **PL4555** and the Thistle related pipeline infrastructure;
3. Quantity of grout bags is an estimate as the as-built details are not definitive;
4. The quantity of deposited rock is estimated or based on the original deposit consent.
5. The section of PL2578 downstream of the Wye Structure to Thistle 'A' was renumbered **PL4555** with its ownership transferred to the Thistle owners;
6. The SSIV and Riser Bases at Thistle 'A' will be left *in situ* meantime pending decommissioning of the Thistle pipelines and infrastructure inside the Thistle 'A' 500m safety zone.

2.1.3 Material Inventory Estimates

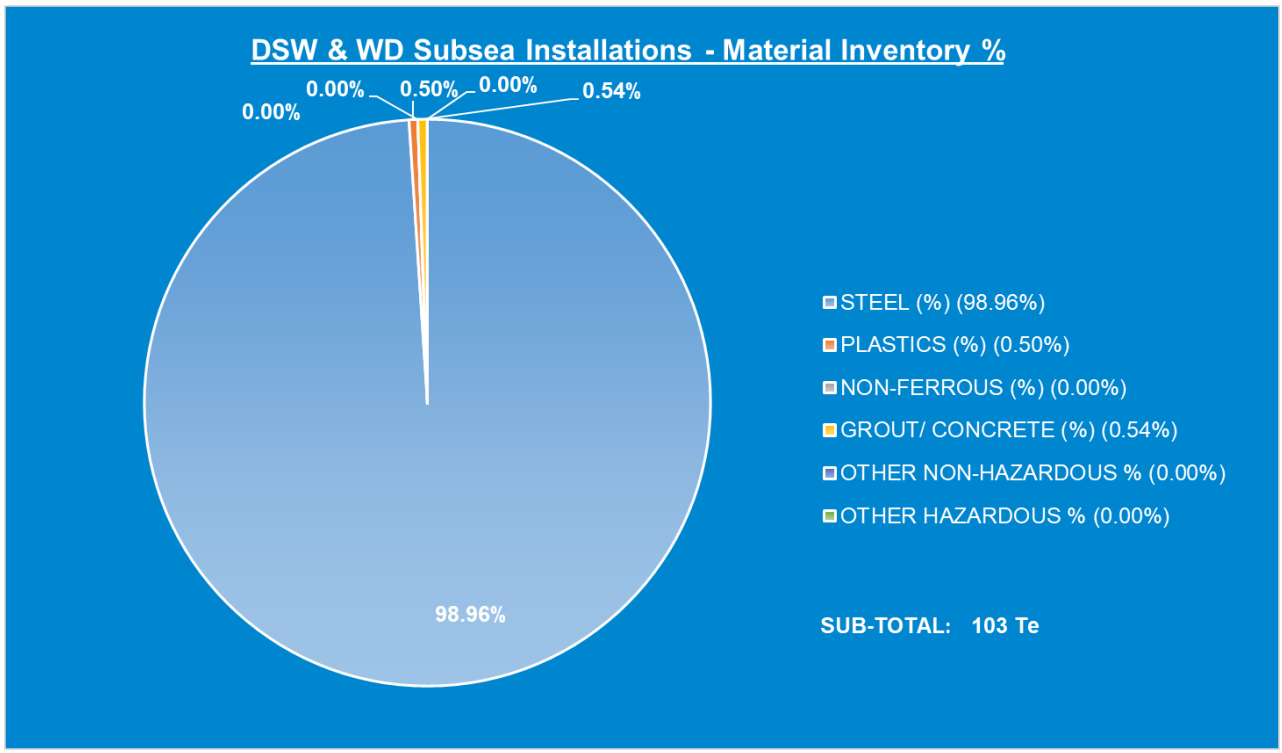

Figure 2.1.1: Pie-Chart of Material Inventory for DSW & WD Installation

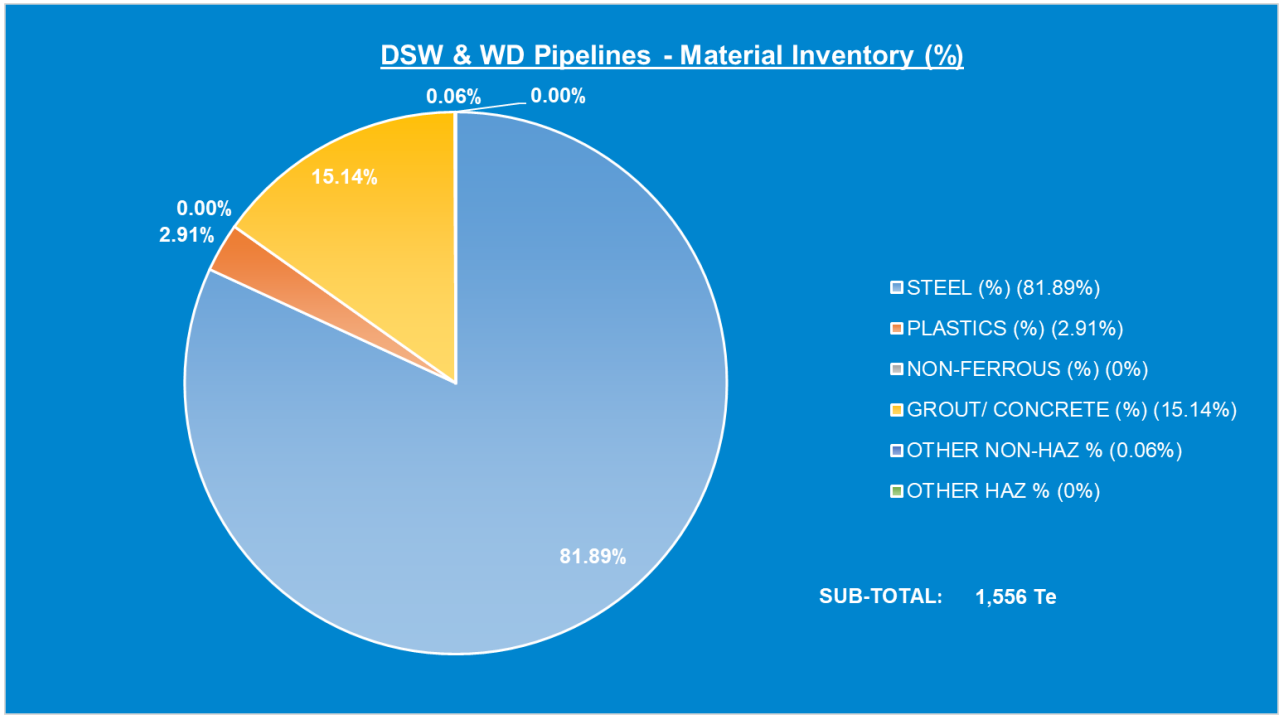

Figure 2.1.2: Pie-Chart of Material Inventory for DSW & WD Pipelines[1]

[1] Material inventory includes Phase 1 materials

2.2 Conrie Related Assets

2.2.1 Subsea Installations including Stabilisation Features

Table 2.2.1: Conrie Subsea Installation Information					
Subsea Installations Including Stabilisation Features	Number	Mass (Te) / Size (m)	Location		Comments/ Status
			WGS84 Decimal	WGS84 Decimal Minute	
Conrie WHPS	1	55.9 8.8m x 9.2m x 6.7m	61.468580° N 01.535337° E	61° 28.1148' N 01° 32.1202' E	
Concrete mattresses	n/a	n/a	n/a	n/a	n/a
Grout bags	n/a	n/a	n/a	n/a	n/a
Formwork	n/a	n/a	n/a	n/a	n/a
Deposited rock	n/a	n/a	n/a	n/a	n/a
Other	n/a	n/a	n/a	n/a	n/a

2.2.2 Pipelines including Stabilisation Features

Table 2.2.2: Conrie Pipeline/Flowline/Umbilical Information									
Pipeline Number (as per PWA)	**PWA Ident**	**Diameter (NB) (inches)[1]**	**Length (m)**	**Description of Component Parts**	**Product Conveyed**	**From – To End Points[2]**	**Burial Status**	**Pipeline Status[3]**	**Current Content3**
PL2572	5-8[3]	8”	38m	Pipespool, duplex	Oil	DBBV at DSW P5 production tree to DSW P4 (Conrie) production tree	Surface laid, protected by concrete mattresses	Out of use	Inhibited seawater
PL2573	18-21	3”	40m	Pipespool, carbon steel	Gas	DSW P4 (Conrie) production tree to DSW P5 production tree		Out of use	Inhibited seawater
PLU2576JP4	1-8	114.5mm	75m	Umbilical jumper	Methanol & hydraulic fluids	DSW SDU to DSW Well P6		Out of use	Seawater

NOTES

1. If diameter is expressed in mm it refers to outside diameter of electrical cable or umbilical pipeline;
2. For brevity, the description of the end-to-end points may differ slightly from those consented;
3. Pipeline status and current content assume that the Northern Producer has departed with the pipeline and umbilicals dealt with accordingly.

Table 2.2.3: Conrie Pipeline Stabilisation Features & Structures				
Stabilisation Feature & Size (m)	**Total Number**	**Total Mass (Te)**	**Location(s)**	**Exposed/Buried/Condition**
Concrete mattresses[1]	17	28.3	**PL2572 (5-8)** 6x between DSW P5 & Conrie Well P1. Refer Figure B.1.1.	Latest survey information suggests the concrete mattresses and grout bags are exposed.
	11	34.6	**PL2576JP4** 11x SDU and Conrie Well P1. Refer Figure B.1.1.	
Grout bags[2]	80	2.0	**PL2572 (5-8)** 40x between P5 and Conrie Well P1. Refer Figure B.1.1.	
			PL2573 (18-21) between Conrie Well P1 & DSW P5, as per **PL2572 (5-8)**. Refer Figure B.1.1.	

Table 2.2.3: Conrie Pipeline Stabilisation Features & Structures				
Stabilisation Feature & Size (m)	**Total Number**	**Total Mass (Te)**	**Location(s)**	**Exposed/Buried/Condition**
			PL2576JP4 40x DSW SDU and Conrie Well P1. Refer Figure B.1.1.	
Deposited rock	n/a	n/a	n/a	n/a

NOTES:

1. Concrete mattresses are 'SPS' type: 6m x 2m x 0.15m (Approx. mass each mattress 3.14Te) or 6m x 3m x 0.15m (Approx. mass each mattress 4.72Te);
2. The quantity of 25kg grout bags is estimated because the as-built data are not explicit.

2.2.3 Well Information

Table 2.2.4: Conrie Well Information			
Well ID	**Designation**	**Status**	**Category of Well**
211/18a-S7	Oil production	Shut in	SS 1-1-1

For details of well categorisation please refer the latest version of the Oil and Gas UK Guidelines for the Decommissioning of wells. Well status is stated on the assumption that Northern Producer has departed.

	560	14.0	**PLU3754** 560x between DSW Well P7 and Ythan Well P1. Refer Figure B.1.1		

NOTES:

1. Concrete mattresses are 'SPS' type: 6m x 2m x 0.15m (Approx. mass each mattress 3.14Te) or 6m x 3m x 0.15m (Approx. mass each mattress 4.72Te);
2. The quantity of 25kg and 1Te grout bags is estimated or based on original Deposit Consents because the as-built data are not explicit.

2.5.3 Well Information

Table 2.5.4: Ythan Well Information			
Well ID	**Designation**	**Status**	**Category of Well**
211/18a-S15	Oil production	Shut in	SS 1-1-1

For details of well categorisation please refer the latest version of the Oil and Gas UK Guidelines for the Decommissioning of wells. Well status is stated on the assumption that Northern Producer has departed.

2.5.4 Material Inventory Estimates

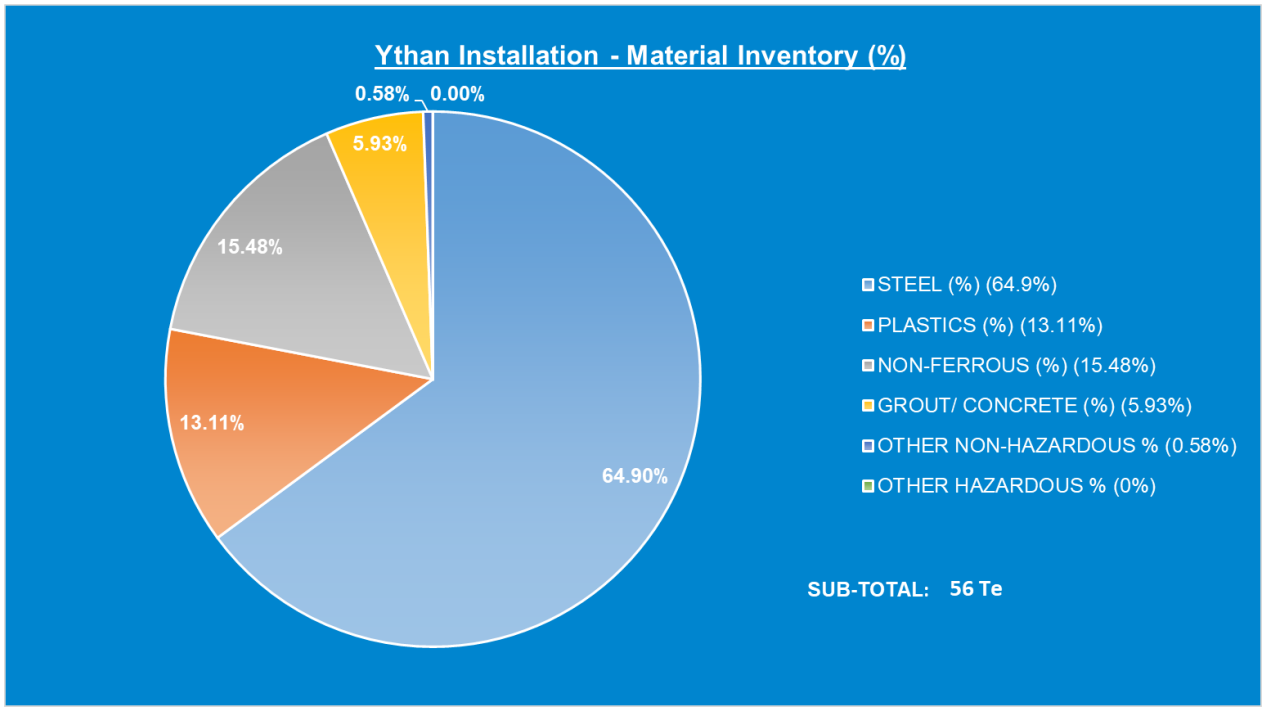

Figure 2.5.1: Pie-Chart of Material Inventory for Ythan Installation

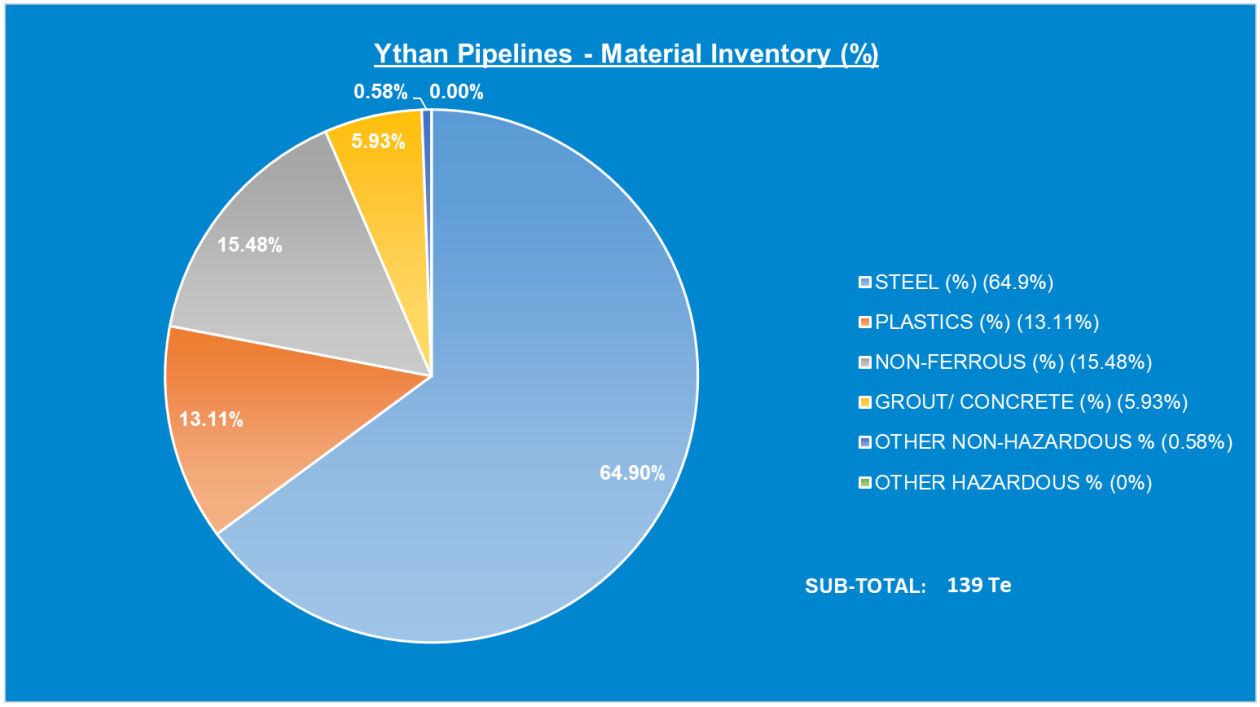

Figure 2.5.2: Pie-Chart of Material Inventory for Ythan Pipelines

3. REMOVAL AND DISPOSAL METHODS

Waste will be dealt with in accordance with the Waste Framework Directive. The re-use of an installation, pipeline, or umbilical pipeline or parts thereof, is first in the order of preferred decommissioning options and such options are currently under investigation. Waste generated during decommissioning will be segregated by type and periodically transported to shore in an auditable manner through licensed waste contractors. Steel and other recyclable metals are estimated to account for the greatest proportion of the materials inventory.

Geographic locations of potential disposal yard options may require the consideration of Trans Frontier Shipment of Waste (TFSW), including hazardous materials. Early engagement with the relevant waste regulatory authorities will ensure that any issues with TFSW are addressed.

In order to explore synergistic opportunities and efficiencies in operational activity and cost, it's possible that the pipelines around the Wye structure (PL2578 & PL2579) will be dealt with at the same time as Wye structure and Thistle pipelines PL4555 & PL4556 and within the Thistle 500m safety zone, PL2579, PLU2580, PLU25480JSO and PLU2580JSG will be decommissioned at the same time as the Thistle infrastructure.

3.1 Installations - Subsea Facilities & Stabilisation Features

Table 3.1.1: Subsea Installations & Stabilisation Features

Subsea installations and stabilisation features	Number	Option	Disposal Route (if applicable)
Conrie installation	1	Complete recovery.	Return to shore for reuse or recycling.
DSW installations	10	Complete recovery.	Return to shore for reuse or recycling.
WD installations	5	Complete recovery.	Return to shore for reuse or recycling.
Ythan installation	1	Complete recovery.	Return to shore for reuse or recycling.

3.2 Pipelines

There is an implicit assumption that options for re-use of the pipelines have been exhausted prior to the facilities and infrastructure moving into the decommissioning phase and associated comparative assessment; therefore, this option has been excluded. The three decommissioning options considered are:

- **Complete removal** – This would involve the complete removal of the pipelines by whatever means would be most practicable and acceptable from a technical perspective;
- **Partial removal or remediation** – This would involve removing exposed or potentially unstable sections of pipelines. Remedial work may need to be carried out to make the remaining pipeline safe for leaving *in situ.* This option is relevant for those pipelines that have known exposures because of poor depth of cover. There will likely be a need to verify their status via future surveys;
- **Leave *in situ*** – This would involve leaving the pipeline(s) *in situ* with no remedial works but possibly verifying their status via future surveys.

All surface laid equipment including pipelines that have not been trenched or buried will be completely recovered from the seabed up to the point where they are buried and taken to shore for re-use or recycling or final disposal. Table 3.2.2 summarises the lengths of pipelines and pipespools being removed, thereby removing potential snagging hazards.

The decommissioning options summarised herein are supported by a comparative assessment where each decommissioning option was comparatively assessed against Technical feasibility and efficacy, Safety concerns, Environmental and Societal impact and Cost [2]. For the purposes of the assessment the pipelines were considered as one of three pipeline groups as summarised in Table 3.2.1:

Table 3.2.1: Pipeline Decommissioning Options and Grouping

Asset	Pipeline ID	Complete removal	Partial removal	Leave *in situ*	Group	Comments
DSW & WD	PL2578 & PL2579	X		X	1	Reasonable depth of cover, no exposures
DSW	PL2572 & PL2573	X		X	1	Good depth of cover, no exposures
DSW	PLU2576	X	X	X	3	Poor cover, numerous exposures; partial removal or remedial works considered
DSW	PLU2577 & PL2581	X	X	X	3	Poor cover, numerous exposures; partial removal or remedial works considered
DSW	PL4262	X		X	2	Good depth of cover, no exposures
WD	PL2582, PLU2585	X	X	X	3	Poor cover, numerous exposures; partial removal or remedial works considered
WD	PL2583 & PL2584	X		X	1	Good depth of cover, no exposures
WD	PL4261	X		X	2	Good depth of cover, no exposures

NOTE:

1. The pipelines listed here excludes those pipelines that were wholly surface laid and covered with concrete mattresses;
2. PLU2577 and PL2581 were trenched into the seabed, deposited rock used to bury all the other pipelines;
3. PL2582 was trenched in the seabed but emerges at the Don pipeline crossings where it is buried under deposited rock.

Decommissioning of the pipeline infrastructure during Phase 1 is addressed in separate Decommissioning Programmes [1].

3.2.1 DSW & WD pipelines - outcome of the Comparative Assessment

Table 3.2.2: DSW & WD Pipeline Decommissioning Proposals

Pipeline or Group	Recommended Option	Justification
PL2578 PL2579	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses, but otherwise leave *in situ*. Removal of surface laid sections of both PL2578 & PL2579 near the Wye Structure (total ~100m each pipeline). For PL2579 at Thistle 'A' this involves removal of ~400m on approach to Thistle.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Once decommissioned, the remaining sections of the pipelines can be expected to remain buried and stable throughout their length.

Table 3.2.2: DSW & WD Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
PLU2580	Completely remove.	Leaves a clear seabed free of potential snagging hazards. Avoids need for future monitoring activities.
PLU2580JSO		
PLU2580JSG		

NOTES:

1. The decommissioning of the pipeline ends at or near the original NP 500m safety zone is addressed in the Decommissioning Programmes for Phase 1 – the departure of the Northern Producer FPF [1];
2. Note that the protection and stabilisation features associated with PL2579 as it by-passes the Wye Structure also protect and stabilise PL4555 which belongs to the Thistle owners. These features will likely be left *in situ* until PL4555 (formerly PL2578) between Thistle 'A' and the Wye Structure is decommissioned as part of the Thistle 'A' pipeline infrastructure;
3. Where buried in deposited rock, remedial work may be required to bury the end of the pipeline where it protrudes out from the rock. As a contingency measure, small deposits of rock may need to be added to the existing rock to make sure that the pipeline ends remain buried.
4. In order to explore synergistic opportunities PLU2580 (which incorporates PLU2580JSO and PLU2580JSG) and associated infrastructure such as riser bases (PLU2580 & PL2579), SSIV skids and pipelines within the Thistle 'A' 500m safety zone will likely be decommissioned at the same time as the Thistle 'A' installation and infrastructure.

3.2.2 Conrie pipelines - outcome of the Comparative Assessment

Table 3.2.3: Conrie Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
PL2572 (5-8)	Completely remove.	Leaves a clear seabed free of potential snagging hazards. Avoids need for future monitoring activities.
PL2573 (18-21)		
PLU2576JP4		

NOTES:

1. The Conrie pipelines are not affected by the proposals for Phase 1 of the decommissioning works, described in [1].

3.2.3 DSW pipelines - outcome of the Comparative Assessment

Table 3.2.4: Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
PL2572 except (5-8)	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses or connected to the DSW	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Once decommissioned, the remaining sections of the pipelines can be

Table 3.2.4: Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
PL2573 except (18-21)	production wells (total length to be removed ~100m each), but otherwise leave *in situ*.	expected to remain buried and stable throughout their lengths.
PLU2576	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses and connected to the DSW SDU (total length ~100m), but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Albeit with poor depth of cover and some exposures, once decommissioned, the remaining section of pipeline is expected to remain mostly buried and stable throughout its length.
PLU2576JP1 to JP7	Completely remove.	Leaves a clear seabed free of potential snagging hazards. Avoids need for future monitoring activities.
PLU2577	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses and connected to the DSW WI wells (total length~200m) and remove part of the buried section up to KP0.070 to remove the anomalous section ~11m long in the trench, but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Albeit with poor depth of cover and some exposures, once decommissioned, the remaining section of pipeline is expected to remain mostly buried and stable throughout its length.
PLU2577JWI2 to JWI4	Completely remove.	Leaves a clear seabed free of potential snagging hazards. Avoids need for future monitoring activities.
PL2581	Leave most of the pipelines *in situ*. Remove wet stored pipespools (total length ~27m) as well as surface laid sections including those currently protected and stabilised with concrete mattresses, but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Albeit with poor depth of cover and some exposures, once decommissioned, the remaining section of pipeline is expected to remain mostly buried and stable throughout its length.
PL4262	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses and connected to the DSW WI wells (total length ~200m), but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Once decommissioned, the remaining section of pipeline can be expected to remain buried and stable throughout its length.
PL4557	Completely remove.	This short section is connected to the SALB. This will also be recovered.
NOTE:		

Table 3.2.4: Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
1. Where buried in the seabed local excavations will be required to locate the pipeline cut point. Following severance of the pipeline the excavation will be mechanically backfilled; 2. Where buried in deposited rock, remedial work may be required to bury the end of the pipeline where it protrudes out from the rock. As a contingency measure, small deposits of rock may need to be added to the existing rock to make sure that the pipeline ends remain buried.		

3.2.4 WD pipelines - outcome of the Comparative Assessment

Table 3.2.5: WD Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
PL2582	Leave most of the pipelines *in situ*. Remove wet stored pipespools (total length ~50m) surface laid sections including those currently protected and stabilised with concrete mattresses, but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Albeit with poor depth of cover and some exposures, once decommissioned, the remaining section of pipeline is expected to remain mostly buried and stable throughout its length.
PL2583	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses and connected to the WD production wells (total length ~160m for each pipeline), but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Once decommissioned, the remaining sections of pipeline can be expected to remain buried and stable throughout their length.
PL2584		
PLU2585	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses and connected to the WD SDU total length ~175m), but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Albeit with poor depth of cover and some exposures, once decommissioned, the remaining section of pipeline is expected to remain mostly buried and stable throughout its length.
PLU2585 JP1 to ‘JP3	Completely remove.	Leaves a clear seabed free of potential snagging hazards. Avoids need for future monitoring activities.
PLU2585JW1 to ‘JW2	Completely remove.	Leaves a clear seabed free of potential snagging hazards. Avoids need for future monitoring activities.
PL4261	Leave most of the pipelines *in situ*. Remove surface laid sections including those currently protected and stabilised with concrete mattresses and connected to the WD WI wells (total length ~120m), but otherwise leave *in situ*.	This results in minimal disturbance to the seabed, lower energy use, reduced risk to personnel, and lower cost. Once decommissioned, the remaining section of pipeline can be expected to remain buried and stable throughout its length.
NOTES:		

Table 3.2.5: WD Pipeline Decommissioning Proposals		
Pipeline or Group	**Recommended Option**	**Justification**
1. Where buried in the seabed local excavations will be required to locate the pipeline cut point. Following severance of the pipeline the excavation will be mechanically backfilled; 2. Where buried in deposited rock, remedial work may be required to bury the end of the pipeline where it protrudes out from the rock. As a contingency measure, small deposits of rock may need to be added to the existing rock to make sure that the pipeline ends remain buried.

3.3 Pipeline Stabilisation Features

All pipeline related structures, concrete mattresses and grout bags will be recovered to shore, except for those associated with the Don pipeline crossings.

3.3.1 DSW & WD pipeline stabilisation features & structures

Table 3.3.1: DSW & WD Pipeline Stabilisation Features & Structures			
Asset	**Number**	**Description**	**Disposal Route (if applicable)**
Concrete mattresses	46	Refer Table 2.1.3, Figure B.4.1 and Figure B.5.1.	Aim to recover all exposed concrete mattresses to shore for re-use, recycling, or disposal.
Grout bags	1,280		Aim to recover all grout bags to shore for recycling & disposal but assume ~80% are recovered for the purposes of estimating as some may be buried.
Deposited rock	2		Leave *in situ*.
Thistle 3" SSIV & Protection Structure (6m x 3.5m x 3.0m) [1]	1		Recover structure to shore for re-use, recycling, or disposal.
8" oil export and umbilical riser base and protection structure, (6.1m x 2.8m x 0.5m) [1]	1		Recover structure to shore for re-use, recycling, or disposal.
3" gas import riser base and protection structure, (3.8m x 2.8m x 0.5m) [1]	1		Recover structure to shore for re-use, recycling, or disposal.
NOTE: 1. Please refer notes 2 & 3 in Table 3.2.2.			

3.3.2 Conrie pipeline stabilisation features

Table 3.3.2: Conrie Pipeline Stabilisation Features			
Asset	**Number**	**Description**	**Disposal Route (if applicable)**
Concrete mattresses	28	Refer Table 2.2.3, Figure B.1.1.	Aim to recover all exposed concrete mattresses to shore for re-use, recycling, or disposal.
Grout bags	80		Aim to recover all grout bags to shore for recycling & disposal but assume ~80% are recovered for the purposes of estimating as some may be buried.

3.3.3 DSW pipeline stabilisation features & structures

Table 3.3.3: DSW Pipeline Stabilisation Features & Structures			
Asset	**Number**	**Description**	**Disposal Route (if applicable)**
DSW SDU & protection structure[2].	1	DSW SDU & Protection Structure (8.5x5.2x3.5) stabilised and secured using a total of 4 piles.	Recover structure to shore for re-use, recycling, or disposal.
Concrete mattresses	256	Refer Table 2.3.2, Figure 1.7.2 and Figure B.1.1.	Aim to recover all exposed concrete mattresses to shore for re-use, recycling, or disposal. Leave the concrete mattresses buried under deposited rock at the Don pipeline crossings *in situ*.
Grout bags (25kg)	2,320		Aim to recover all grout bags to shore for recycling & disposal but assume ~80% are recovered for the purposes of estimating as some may be buried.
Grout bags (1Te)	3		Aim to recover all grout bags
Deposited rock	3		Leave *in situ*.

NOTES:

1. Please refer notes 2 & 3 in Table 2.3.3;
2. Assuming there would be no technical issues, the piles will be internally cut 1.0m below the seabed as the seabed is stable in this area. Should any difficulties be encountered in accessing the piles internally such that an excavation will be required, OPRED will be consulted before the piles are cut.

3.3.4 WD Pipeline stabilisation features & structures

Table 3.3.4: WD Pipeline Stabilisation Features & Structures			
Asset	**Number**	**Description**	**Disposal Route (if applicable)**
WD SDU & protection structure[2].	1	WD SDU & Protection Structure (8.5x5.2x3.5) stabilised and secured using a total of 4 piles.	Recover structure to shore for re-use, recycling, or disposal.
Concrete mattresses	256	Refer Table 2.3.2, Figure 1.7.2 and Figure B.3.1.	Aim to recover all exposed concrete mattresses to shore for re-use, recycling, or disposal. Leave the concrete mattresses buried under deposited rock at the Don pipeline crossings *in situ*.
Grout bags (25kg)	2,320		Aim to recover all grout bags to shore for recycling & disposal but assume ~80% are recovered basis of diminishing returns for the amount of effort required.
Grout bags (1Te)	3		Aim to recover all grout bags
Deposited rock	3		Leave *in situ*.

NOTES:

1. Please refer notes 2 & 3 in Table 2.3.3;
2. Assuming there would be no technical issues, the piles will be internally cut 1.0m below the seabed as the seabed is stable in this area. Should any difficulties be encountered in accessing the piles internally such that an excavation will be required, OPRED will be consulted before the piles are cut.

3.3.5 Ythan pipeline stabilisation features

Table 3.3.5: Ythan Pipeline Stabilisation Features & Structures			
Asset	**Number**	**Description**	**Disposal Route (if applicable)**
Concrete mattresses	30	Refer Table 2.5.3, Figure B.1.1.	Aim to recover all exposed concrete mattresses to shore for re-use, recycling, or disposal.
Grout bags	1680		Aim to recover all grout bags to shore for recycling & disposal but assume ~80% are recovered basis of diminishing returns for the amount of effort required.

3.4 Wells

Table 3.4.1: Well Decommissioning
The Conrie, Don South-West, West Don and Ythan inventory consists of a total of 17 wells: Conrie (211/18a-S7); Don South-West (211/18a-S2z, 211/18a-S4, 211/18a-S6, 211/18a-S8z, 211/18a-S9, 211/18a-S10y, 211/18a-S11, 211/18a-S12z, 211/18a-S13, 211/18a-S14); (West Don) 211/18a-W1, 211/18a-W3z, 211/18a-W4, 211/18a-W5, 211/18a-W6; and Ythan (211/18a-S15). The wells listed in Section 2.2.3 (Table 2.2.4), Section 2.3.3 (Table 2.3.4), Section 2.4.3 (Table 2.4.4), and Section 2.5.3 (Table 2.5.4) will be decommissioned in accordance with latest version of the Oil & Gas UK Well Decommissioning Guidelines. A Master Application Template (MAT) and the supporting Subsidiary Application Template (SAT) will be submitted in support of works carried out. An application to decommission the wells will be made via the online Well Operations Notification System (WONS) on the OGA Energy Portal. Well decommissioning is currently scheduled to commence earliest in 2026 although should any integrity concerns arise meantime, they will be addressed sooner as per the Gantt Chart in Figure 6.3.1. EnQuest has prepared a well integrity risk assessment and will address any mitigations required.

3.5 Waste Stream Management Methods

Table 3.5.1: Waste Stream Management Methods	
Waste Stream	**Removal and disposal method**
Bulk liquids	As part of Phase 1 of the decommissioning operations, bulk hydrocarbons will have been exported with any residual hydrocarbons removed from the FPF in accordance with contractual agreements with the vessel owner. Any associated bulk seawater from topsides will have been cleaned and disposed overboard under permit. The production risers, pipelines and water injection flowlines will have been flushed and left filled with seawater as appropriate prior to being disconnected. Further cleaning and decontamination of materials recovered to shore will take place onshore prior to recycling / re-use or disposal.
Marine growth	Where necessary and practicable to allow access, some marine growth will be removed offshore. The remainder will be brought to shore and disposed of according to guidelines and company policies.
NORM	Based on production records to date, NORM is expected. Tests for NORM will be undertaken offshore and any NORM encountered will be dealt with and disposed of in accordance with guidelines and company policies.
Asbestos	It unlikely that asbestos will be present in the pipeline infrastructure and structures that are being recovered to shore. However, should any such material found will be dealt with and disposed of in accordance with guidelines and company policies.
Other hazardous wastes	Will be recovered to shore and disposed of according to guidelines and company policies and will also take place under appropriate permits.
Onshore Dismantling sites	Appropriately licensed sites will be selected for dealing with materials recovered to shore. The dismantling site must demonstrate proven disposal track record and waste stream management throughout the deconstruction process and demonstrate their ability to deliver re-use and recycling options.

Table 3.5.2: Inventory Disposition				
Inventory	**Total inventory (Te)**	**Phase 1 planned to shore (Te)**	**Phase 2 planned to shore (Te)**	**Left *in situ* (Te)**
Installations				
Don South-West & West Don[1]	103	-	103	-
Conrie	56	-	56	-
Don South-West	663	-	663	-
West Don	280	-	280	-
Ythan	56	-	56	-
Pipelines & Stabilisation				
Don South-West & West Don	1,556	449	310	797
Conrie	69	-	69	-
Don South-West	2,589	114	1,356	1,119
West Don	783	49	216	518
Ythan	139	-	139	-
SUB-TOTAL (excl. rock)	**6,295**	**612**	**3,179**	**2,504**
Deposited Rock				
Don South-West & West Don	58,000	-	-	58,000
Conrie	-	-	-	-
Don South-West	72,705	-	-	72,705
West Don	35,159	-	-	35,159
Ythan	-	-	-	-
TOTAL DEPOSITED ROCK	**165,864**	**-**	**-**	**165,864**

NOTES:

1. The inventory associated with the Northern Producer is dealt with in the Decommissioning Programmes for Phase 1 [1] and is excluded here.

Table 3.5.3: Re-use, Recycle & Disposal Aspirations for Recovered Material			
Inventory	**Re-use**	**Recycle**	**Disposal (e.g. Landfill)**
Installations	<5%	>95%	<5%
Pipelines & structures	<5%	>95%	<5%

All recovered material will be transported onshore for re-use, recycling, or disposal. The expectation is that any synthetic materials associated with the pipelines will be shredded and recycled. It is not possible to predict the market for re-usable materials with any confidence so the figures in Table 3.5.3 are aspirational.

4. ENVIRONMENTAL APPRAISAL

4.1 Environmental Sensitivities

The environmental characteristics and sensitivities are such that the seabed area is stable with relatively homogenous community. It is typical of sandy sediments, generally diverse and evenly distributed community with low taxonomic dominance.

Generally uniform and background hydrocarbon and metal concentrations typical of the northern North Sea, concentrations of hydrocarbons and metals were below recognised toxicity thresholds and were not found to have exerted any notable influence on the macrofaunal community structure.

The closest SAC or Annex 1 feature is the Pobie Bank Reef that is ~109km south-west of NP.

Impact from operations from the NP are not significant as there are no discharges from drilling, and seabed impacts from anchors can be considered minimal.

Commercial fishing activity in the area can be considered **low**.

The reference sources used for this assessment are as follows:

- Environmental Baseline Survey (Don SW and SW to Thistle) & Habitat Investigation (W. Dons) UKCS Block 211/18. May-July 2007;
- Fugro Pipeline Route Survey. Dons West. July 2010;
- Gardline Environmental Baseline & Habitat Assessment, East Dons Site Survey. UKCS 211/18 and 211/19. June 2012;
- Environmental Baseline & Habitat Assessment. Dunlin By-pass. July 2018;
- Using data taken from either an adjacent month or adjacent block, seabird sensitivity except for January, November or December of any given year, seabird vulnerability is considered low;
- Sand discharges have been minimal offshore;
- There is only one wreck located within Block 211/18 designated under the Protection of Military Remains Act 1986 ‘war graves’.
- There are no historical Marine Protected Areas in the vicinity of the Northern Producer FPF.

4.2 Potential Environmental Impacts and their Management

4.2.1 Overview

The significance of any environmental impacts and risks (potential impacts) associated with each element of the project activities are described in Table 4.2.1.

4.2.2 Key control and mitigation measures

Table 4.2.1: Key Control and Mitigation Measures
Underwater Noise
• A SIMOPS plan for vessel activity in the field will be put in place • Vessel, cutting and trenching operations will use standard methods and equipment. No explosives used.
Discharges to Sea
• All contracted vessels will operate in line with IMO and MARPOL regulations • Pipelines and spool are to be flushed, filled with seawater, and isolated prior to disconnection All discharges will be permitted under applicable UK legislation.
Accidental Events
• All contracted vessels will have a ship-board oil pollution emergency plan (SOPEP) in place • A Collision Risk Management Plan will be developed and implemented • Agreed arrangements in place with oil spill response organisation for mobilising resources in event of a spill • Existing field OPEP in place to reduce the likelihood of hydrocarbon release and define spill response in place • Lifting operations will be planned to manage the risk • Recovery of any dropped objects will take place • Vessel contactors will have procedures for fuel bunkering that meet EnQuest's standard • Where practicable, re-fuelling will take place during daylight hours only.
Physical Presence of Infrastructure & Vessels
• All vessels will comply with standard marking conditions and consent to locate conditions • If required, a specific SIMOPS plan for vessel activity in the field will be put in place, noting that a standard DSV SIMOPS Guideline already exists for the asset • All seabed infrastructure will be fully protected on the seabed in the interim period between Phase 1 & 2 • If full seabed clearance of the FPF 500m zone is not completed, a guard vessel hired by EnQuest will remain on site • Small quantities of rock may be required where exposed pipeline ends remain after severance at existing deposited rock; • Seabed clearance certificate issued if an overtrawl survey is carried out, otherwise survey findings will be described in the close out report.
Atmospheric Emissions & Energy Use
• Time vessels spend in the field will be optimised, with a SIMOPS plan in place • Reuse or recycling of materials will be the preferential option.
Waste
• Onshore treatment will take place at waste management site with appropriate permits and licenses • UK waste disposal sites will be used where practicable.
Seabed Disturbance
• Activities which may lead to seabed disturbance planned, managed, and implemented in such a way that disturbance is minimised. A Marine License will be in place for any planned operational disturbance • Mechanical backfill of the excavated areas, but no remedial seabed levelling of pipeline corridors • Debris survey undertaken on completion of the activities and where possible resultant debris will be recovered • Minimising disturbance to seabed from overtrawl through liaison with fishing organisations and regulator.

Following the environmental assessment and implementation of additional control and mitigation measures where necessary, the level of environmental risk from the planned and unplanned decommissioning operations, is **low**. In addition, any cumulative impacts limited to seabed disturbance have been assessed and also considered to be **low**. Therefore, the decommissioning of the Conrie, Don South-West, West Don and Ythan installations, pipelines and associated stabilisation features can be completed without causing significant impact to the environment.

5. INTERESTED PARTY CONSULTATIONS

5.1 Consultations Summary

During the public consultation period (15 December 2020 to 29 January 2021), copies of the Decommissioning Programmes and supporting documents were forwarded to the following Statutory Consultees:

- The National Federation of Fishermen's Organisations (NFFO);
- The Scottish Fishermen's Federation (SFF);
- The Northern Ireland Fish Producer's Organisation (NIFPO); and,
- Global Marine Group (GMG).

Meetings and telephone calls have been held with SFF to advise of progress and to provide more detail of the proposals. A summary of the proposals were also sent to all Statutory Consultees in advance of the Statutory Consultation.

Copies of the Decommissioning Programmes and supporting documents were made available as a download from the EnQuest website: www.enquest.com/operations/uk-decommissioning.

Due to Covid-19 restrictions a bound copy was not sent to the local public library but via the Public Notice advice was provided to advise that a digital or hardcopy of the Decommissioning Programmes can be made available on request.

A public notice was published in the following local newspapers by:

- "Press & Journal" on 15 December 2020;
- "The (Edinburgh) Gazette" on 15 December 2020.

Please refer to Appendix C.1 for a copy of the public notices. The public notice gave instructions for representations to be made in writing by Friday 29 January 2021. EnQuest received no comments or any written or verbal representation from the public in direct response to the public notice or during the public consultation period.

Copies were also submitted for consideration to OPRED.

Table 5.1.1: Summary of Stakeholder Comments

Who	Comment	Response
INFORMAL CONSULTATIONS		
GMG		
ITHACA	Issued to Ithaca 03 November 2020.	No adverse comments were received.
NFFO	The recommendation from the comparative assessment and the decommissioning proposals contained herein were sent to NFFO by email 05 November 2020.	No adverse comments were received with NFFO being happy to defer to SFF as the decommissioning activities would be carried out in Scottish waters.

Table 5.1.1: Summary of Stakeholder Comments		
Who	**Comment**	**Response**
NIFPO	The recommendation from the comparative assessment and the decommissioning proposals contained herein were sent to NIFPO by email 05 November 2020.	No adverse comments were received with NIFPO being happy to defer to SFF as the decommissioning activities would be carried out in Scottish waters.
SFF	The recommendation from the comparative assessment and the decommissioning proposals contained herein were presented to SFF in an MS Teams meeting 30 October 2020.	• SFF had no adverse comment to make concerning the Phase 2 decommissioning proposals relating to the departure of the Northern Producer and clearance of the 500m zone; • SFF would be inclined to prefer pipelines and umbilicals being left with exposures and non-reportable spans rather than multiple spans being removed leaving cut ends in situ, even though the cut ends would be remediated by reburial or deposition of additional rock; • SFF would be inclined to avoid the deposition of additional rock if the area be demonstrated as safe by a successful overtrawl; • Use of a chain-mat could be optional and the more usual trawl gear could be used if no snagging hazards appear to be present; • There remains a source of tension regarding the requirement to overtrawl and the demonstration of a clear seabed, with the SFF and NFFO arguing that they can only really be satisfied that the seabed is safe for fishing by their having carried an overtrawl rather than it being demonstrated for example by Side Scan Sonar and ROV survey. The idea of avoiding an overtrawl originally arose as a result of concerns of damage to environmentally sensitive areas such as North Norfolk sandbanks in the southern North Sea where JNCC and EMT in particular, has argued against the use over overtrawl. • EQ confirmed that any local excavation work would be backfilled; any rock displaced for local excavation work would be reinstated.
STATUTORY CONSULTATIONS		
NFFO	The Decommissioning Programmes and supporting documentation were sent to NFFO via email on 15 December 2020.	The NFFO had no adverse comment to make concerning the decommissioning proposals.
NIFPO	The Decommissioning Programmes and supporting documentation were sent to NIFPO via email on 15 December 2020.	The NIFPO had no adverse comment to make concerning the decommissioning proposals.

Table 5.1.1: Summary of Stakeholder Comments		
Who	**Comment**	**Response**
SFF	The Decommissioning Programmes and supporting documentation were sent to SFF via email on 15 December 2020.	The SFF had no adverse comment to make concerning the decommissioning proposals.
GMG	The Decommissioning Programmes and supporting documentation were sent to SFF via email on 15 December 2020.	The GMG had no adverse comment to made concerning the proposals.
Public		No adverse comment received.

6. PROGRAMME MANAGEMENT

6.1 Project Management and Verification

An EnQuest project management team will manage the operations of competent contractors selected for all decommissioning activities. The team will ensure the decommissioning is executed safely, in accordance with legislation and EnQuest Health and Safety principles. If required, changes to the Decommissioning Programmes will be discussed with OPRED with any necessary approvals sought.

6.2 Post-Decommissioning Debris Clearance and Verification

The 500m safety zones will be subject to clear seabed assessment when the decommissioning activities have concluded.

As indicated in Figure 6.3.1, it is proposed that post decommissioning surveys near the Wye Structure (i.e. SALB) and Thistle 500m zone will be addressed and reported as part of Thistle decommissioning activities.

It is proposed that EnQuest will work with OPRED and SFF on behalf of the Section 29 Holders to investigate use of an evidence-based approach to establish an acceptable clear seabed for the 500m zone. As the seabed is not in an environmentally sensitive area, an overtrawl will be carried out to verify the pipeline corridor and condition of the seabed after decommissioning activities have been completed. The overtrawl will be supported by a Certificate of Clearance. Evidence of a clear seabed will also be included in the Close Out Report and sent to the Seabed Data Centre (Offshore Installations) at the Hydrographic Office.

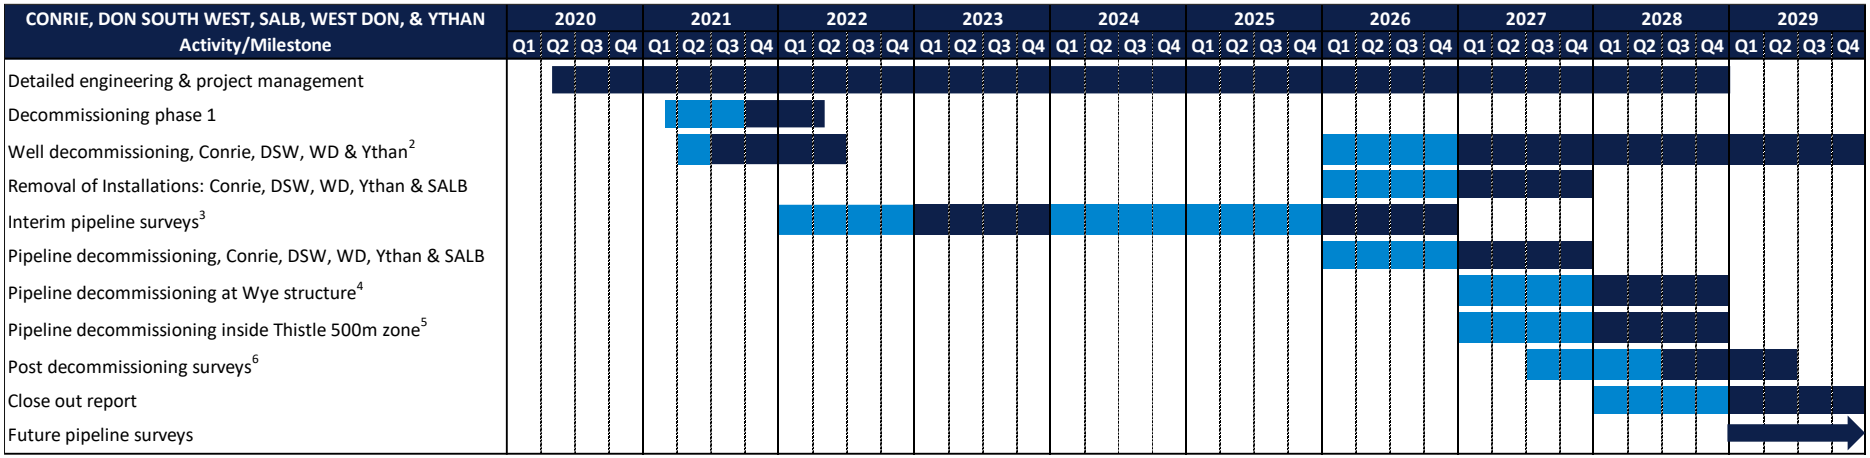
Following completion of decommissioning activities an ‘as-left’ environmental survey will be carried out, with the main findings documented in the final Close Out Report.

Any oil and gas debris will be recovered from the seabed for onshore disposal or recycling in line with existing disposal methods.

6.3 Schedule

A proposed schedule is provided in Figure 6.3.1. The activities are subject to the acceptance of the Decommissioning Programmes presented in this document and any unavoidable constraints (e.g. vessel availability) that may be encountered while executing the decommissioning activities. Therefore, activity schedule windows have been included to account for this uncertainty.

The commencement of offshore decommissioning activities will depend on commercial agreements and commitments. EnQuest will examine the possibility of including the offshore work in a wider campaign of subsea works to reduce costs.



Notes / Key

Most likely period of activity

Activity window to allow campaigning flexibility associated with decommissioning activities

1. Current indications are that NP FPF sailaway & Phase 1 of the decommissioning will be carried out early Q2 2021;
2. The first phase of well decommissioning will address wells with known integrity issues;
3. Most recent surveys were conducted in 2019. Timing and frequency of interim pipeline surveys to be agreed with OPRED
4. Decommissioning of pipelines and infrastructure at Wye structure (i.e. PL2578 & PL2579) will likely be carried out in the same campaign as PL4555 & PL4556; both these pipelines are part of the Thistle pipeline infrastructure;
5. Decommissioning of pipelines (i.e. PLU2580, PLU2580JSO, PLU2580JSG, and PL2579) and associated infrastructure on approach to Thistle 'A' will likely be carried out in the same campaign as PL4555 and other pipelines associated with Thistle.
6. Post decommissioning surveys near the Wye Structure (i.e. SALB) and Thistle 500m zone will be addressed and reported as part of Thistle decommissioning activities.

Figure 6.3.1: Gantt Chart of Project Plan

6.4 Costs

Decommissioning costs will be provided separately to OPRED and OGA.

6.5 Close Out Report

In accordance with OPRED guidelines, a Close Out Report will be submitted to OPRED explaining any variations from the DP, normally within 12 months of completion of the offshore decommissioning scope.

As indicated in Figure 6.3.1, it is proposed that the close out for the areas near the Wye Structure (i.e. SALB) and inside the Thistle 'A' 500m zone will be addressed and reported as part of Thistle 'related decommissioning activities.

6.6 Post-Decommissioning Monitoring and Evaluation

The frequency of future surveys and the requirement for legacy and liability management will be described in the Close Out report and agreed with OPRED. The approach will be supported with a risk assessment.

It is proposed that residual liability for individual pipelines remaining *in situ* following the decommissioning works associated with these Decommissioning Programmes will remain with the respective DSW & WD, DSW and WD Section 29 holders identified in Section 1.5 (Table 1.5.2, Table 1.5.6, and Table 1.5.8 respectively). Unless agreed otherwise in advance with OPRED, EnQuest will remain the focal point for such matters, such as any change in ownership, for example.

The requirement for legacy and liability management will be described in more detail in the Close Out report.

Appendix C.1 Public Notices

ENQUEST HEATHER LIMITED
PETROLEUM ACT 1998
CONRIE, DON SOUTH WEST, WEST DON & YTHAN FIELD DECOMMISSIONING

EnQuest Heather Limited has submitted, for the consideration of the Secretary of State for Business, Energy & Industrial Strategy, draft Decommissioning Programmes for the Conrie, Don South West, West Don and Ythan fields located in UK Blocks 211/13b, 211/18a, and 211/18e of the Northern North Sea Sector of the United Kingdom Continental Shelf. In accordance with the provisions of the Petroleum Act 1998, it is a requirement of the Act that interested parties be consulted on such decommissioning proposals.

The facilities covered by the Decommissioning Programmes are:

- Don South West and West Don Single Anchor Loading Buoy Mooring Base ('SALB');
- Don South West and West Don pipelines PL2578, PL2579, PLU2580, PLU2580JSG, and PLU2580JSO;
- Conrie wellhead protection structure (1x);
- Conrie pipelines PL2572 (original identification numbers 5 to 8 only), PL2573 (original identification numbers 18 to 21 only) and PLU2576JP4;
- Don South West wellhead protection structures (10x);
- Don South West pipelines PL2572 (excluding identification numbers 5 to 8), PL2573 (excluding identification numbers 18 to 21), PLU2576, PLU2576JP1 through PLU2576JP7, PLU2577, PLU2577JWI2, PLU2577JWI3, PLU2577JWI4, PL2581, PL4262, and PL4557;
- West Don wellhead protection structures (5x);
- West Don pipelines PL2582, PL2583, PL2584, PLU2585, PLU2585JP1, PLU2585JP2, PLU2585JP3, and PLU2585JWI1, PLU2585JWI2, and PL4261;
- Ythan wellhead protection structure (1x); and
- Ythan pipelines PL3749, PL3751, PLU3752, PLU3753, and PLU3754.

The SALB is located approximately 521km North-North East of Aberdeen while the Conrie, Don South West, West Don and Ythan fields are located approximately 527km North-North East of Aberdeen.

EnQuest Heather Limited hereby gives notice that the combined Decommissioning Programmes for Conrie, Don South West, West Don and Ythan fields and associated installations and pipeline infrastructure can be viewed at internet addresses: www.enquest.com/operations/uk-decommissioning

Alternatively, a digital or hardcopy of the Decommissioning Programmes can be requested from Mr Ian Wood at ian.wood@enquest.com.

Interested parties are kindly requested to submit any representations in writing or electronically by 29 January 2021 to the following address for the attention of Mr Ian Wood:

Hello Ian
In reference to the Northern Producer FPF and Don west & south west Don fields decommissioning program and all associated pipelines.

The National Federation Fisherman's Organisation would like to thank EnQuest Heather Limited for the detailed documentation explaining the planned methodology on planned decommissioning of these assets.

Due to the geographical area of the planned decommissioning of assets which in Scottish Waters the NFFO have no comments regarding the decommissioning program as the Scottish Fishermen's Federation who we work closely with are best placed to comment and raise any concerns if required.

Kind Regards

Ian Rowe

NFFO Services

General Manager.

Dear Ian,

THE DONS DECOMMISSIONING PHASES 1 AND 2 – STATUTORY CONSULTATION DRAFTS

I refer to the Consultation on Draft Decommissioning Programmes and key supporting documentation provided in your emails of 15 December 2020.

The Scottish Fishermen's Federation (SFF) appreciates the clearly laid out and detailed explanation of EnQuest's decommissioning proposals for the Dons Decommissioning Phases 1 and 2 programmes and place on record our appreciation of the information provided and discussions held at earlier briefing sessions.

As highlighted to your colleagues previously, the concerns of fishermen remain primarily that of safety and the physical impact on the fishing grounds of the long-term presence of oil industry infrastructure on the seabed.

We are therefore pleased to note that under the Dons Decommissioning Phase 1 programme, it is EnQuest's intention to remove the Northern Producer FPF and that the associated riser systems from Don South West and West Don fields will be disconnected and recovered to a point where no snagging hazards remain within the 500m safety zone.

In relation to the Dons Decommissioning Phase 2 programme, it is noted that the Conrie, Don South West, West Don and Ythan installations, along with the SALBMB will be fully removed as will all associated surface laid pipelines. It is further noted that the wells associated with the aforementioned sites will all be decommissioned in line with latest OGUK guidelines and that no drill cutting piles exist.

In relation to sections of pipelines and umbilicals that are trenched and buried along their length, we accept the reasoning behind the recommendation (based on the outcome of the comparative assessment of feasible

options) of leaving these in situ with minimum intervention in order to minimise seabed disturbance. The phased decommissioning approach for specific pipelines is also noted.

As you will be aware, any pipelines left on the seabed represent a legacy issue and will require on going monitoring. Where rock cover is deployed, we would look for the size and profile of the rock to follow normal industry standards and would recommend that such rock dump berms are incorporated into the post decommissioning debris clearance trawl sweeps to verify that, at the time of deposit, they did not pose a risk to fishing.

As highlighted during the earlier EnQuest-SFF briefing sessions, given past experiences of both abandoned wellhead and oil and gas fields in the process of being decommissioned, the SFF has serious reservations regarding the use of survey data to verify that an area is safe for fishing activity to resume following decommissioning activity. It is our view that the undertaking of trawl verification sweeps under controlled conditions, which replicated the fishing operations that will be permitted in the area following the decommissioning work, is the best method of establishing that it is safe for fishing to resume in said area. With this in mind, we are pleased to hear that as the seabed in question is not in an environmentally sensitive area, EnQuest are proposing that trawl verification sweeps are carried out to establish an acceptable clear seabed for the relevant 500m safety zones and pipeline corridors.

Finally, and as highlighted previously, detailed information regarding the SFF's Oil and Gas Decommissioning Policy and accompanying Key Principles document can be viewed via the SFF's website using the following link: https://www.sff.co.uk/sff-offshore-oil-gas-decommissioning-policy/.

Yours sincerely,

Steven Alexander
Offshore Liaison

Hi Ian,

I can confirm receipt of the combined Decommissioning Programmes for Conrie, Don South-West, West Don and Ythan fields.

I have reviewed the documentation provided for the Kingfisher Decommissioning Programs and as there does not appear to be any telecommunication cables in the near vicinity, no further comments from me.

In the event that any plans change, if any seabed invasive operations are to be conducted near any telecommunication assets, please can the cable owner be notified in advance. Contact details of cable systems can be found in the following link. https://kis-orca.eu/map/

Thanks, Alex
